## **CONVERGING ISSUES IN VETERINARY AND PUBLIC HEALTH**

The daily interactions of humans, animals, and the environment have a dramatic impact on public health. Current and evolving health threats include infections transmitted through animals, insects, food, and water, as well as illnesses resulting from environmental toxins, the misuse of antibiotics, and bioterrorism. Effectively meeting these challenges requires strong links between human and animal health clinicians, researchers, laboratorians, and public health officials.

Dr. Lonnie King, dean of the Michigan State University College of Veterinary Medicine, is on leave for one year serving as director for the Office of Strategy and Innovation for the Centers for Disease Control and Prevention in Atlanta. He earned his veterinary degree from Ohio State University in 1970, a master's degree in epidemiology from the University of Minnesota in 1980, and a master's degree in public administration from American University in Washington, D.C., in 1991. He is a board-certified member of the American College of Veterinary Preventive Medicine and has completed the senior executive fellowship program at Harvard University. He served as president of the Association of American Veterinary Medical Colleges in 1999-2000 and was the vice chair for the National Commission on Veterinary Economic Issues from 2000-2004. He is on the board of scientific counselors to the CDC's National Center for Infectious Diseases, a member of the Institute of Medicine's committee on microbial threats to health, editor for the *OIE Scientific Review on Emerging Zoonoses*, and president of the American Veterinary Epidemiology Society. He was elected as a member of the Institute of Medicine of The National Academies in 2004.

His presentation at Auburn is sponsored by the Joy Goodwin Distinguished Lecture Series and the Phi Zeta veterinary honor society. For more information on his presentation, contact Dr. Gary Beard at 844-3699.
