Megan Hindman DVM MS

2 **A Brief Bio**

- Graduated from Iowa State University with a B.S. in Microbiology
- Earned my DVM from Iowa State University
- Earned a MS in Population Sciences in Animal Health
- Mom to two little boys and a girl
- “Heifer-developer” herself

3 **Outline**

- Introduction of day one calf care
- Environment
- Nutrition
- Health
- Case study

4 **Day one calf care (DOCC)**5 **Environment**

- Most cattle are outdoors
- Thermoneutral zone is 55°F to 86°F (1)
- Energy expenditure increases the risk of failure of passive transfer (2,3)
 - removes brown adipose tissue faster than can replace energy= failure to walk, stand or nurse
- Moisture in the environment not just temperature matter
- Maternal bonding
- Environment exposure of disease

6 **Environment- mitigation strategies**

- 1 Cold, wet or windy environment
- 2 Warm
 - Get calf up to normal temperature (101-103°F)
 - Vehicle heater, calf warmer, warm bath
 - Dry
 - Dry calf
 - Towel, fan, blower, dam
 - Dry environment
 - Deep bedding and out of wind
- 3 Hot, dry environment
- 4 Shade
 - Air movement
 - Evaporative cooling

7 **Environment-maternal bonding**

-
-
-

8 Nutrition

- Calves are born hypogammaglobinemia or agammaglobinemia (5-7)
 - Cotyledenary synepitheliochorial
- Colostrum is sole source of nutrition and immunity for calves
-

9

10 Colostrum

- 1 • Carbohydrates
 - Lactose and oligosaccharides sialyllactose #1
- Proteins
 - IgG, IgM, and IgA- IgG1 #1
 - Albumin, lactoferrin, casein
- Growth factors
 - Insulin growth factor #1
- Enzymes
 - Lactoperoxidase, proteinases, lipase, esterases, phosphatases
- Enzyme inhibitors
-
- 2 • Nucleotides and Nucleosides
 - Cytokines
 - Lipids
 - Minerals
 - Vitamins
 - Vitamin A, Vitamin E, Vitamin D
 - Vitamin C

11 Colostrum

- Parity
- Feedstuff prior to parturition
 - Energy
- Immunologic priming
- Mineral and vitamin status
- Pre-term parturition
-
-

12 How good did she do??

- 1 Total Protein
- 2 • ELISA for IgG specific
 - Direct method

- 1+ day for result
 - Multiple steps
 - 3 • Measure ALL proteins
 - indirect
 - Cow side
 - Simplistic
 -
- 13 **When to intervene?**
- Dystocia
 - Calves that had not stood within 1-2 hours from birth
 - No udder development on dam
 - Leaking colostrum
 - "I don't wanna mom today, or ever"
 - Poor udder confirmation
- 14 **What to Intervene with?**
- Ensure calf is warm
 - COLOSTRUM based colostrum products
 - At least 200g IgG if you are going to replace, if dam has enough or you want to jump start it 100g
 -
- 15 **Colostrum based supplements/replacers**
- 16 **Health**
- Observational
 - Umbilical health
 - Immune stimulation
- 17 **Observation**
- Brief physical exam
 - Is it standing?
 - Is it nursing?
 - Any milk coming out of the nose/milk?
 - Is it defecating?
- 18 **Umbilical health**
- Watch for excessive hemorrhage or herniation
 - Spray with 7% iodine tincture
 - Dip entire cord or spray EVERYWHERE
 - Re-dip every 12 + hours
 - Clean environment
- 19 **Immune stimulation**
- Maternal antibody interference caution
 - Ineffective
 - Harmful
 - Oral or Nasal IgA stimulation products (8)

20 **CASE STUDY**

21 **Case:**

33 **What to do right now?**

34

35

36 **What to do right now?**

37 **Day one calf care (DOCC)**

38

39

40

41

42 **Day one calf care (DOCC)**

43 **Other observations**

- Intervention is recorded and occurs if:
 - Dystocia, brix score on colostrum <22, fail to observe nurse within 2 hrs
 - 200 g of IgG PO of bovine colostrum product
- Once calved, pairs are placed in a pen together for 3-4 days
 - Cows exit pairing pens in the morning for various times to eat at bunk
- Cows provided TMR
 - Mineral/vitamin pack meets recommendations
 - Cows are on a low energy diet

- Vaccination status of cows: great
 - Respiratory MLV and scour vaccine administered on the label prior to calving

44 Opportunities

- Intervention is recorded and occurs if:
 - Dystocia, brix score on colostrum <22, fail to observe nurse within 2 hrs
 - 200 g of IgG PO of bovine colostrum product
- Once calved, pairs are placed in a pen together for 3-4 days
 - Cows exit pairing pens in the morning for various times to eat at bunk
- Cows provided TMR
 - Mineral/vitamin pack meets recommendations
 - Cows are on a low energy diet
- Vaccination status of cows: great
 - Respiratory MLV and scour vaccine administered on the label prior to calving

45 What do we do going forward?

- Stop cow movement from pairing pens
- Increased only energy in ration at the last 4-6 weeks of gestation to 120% above maintenance (9)
- ~~Vaccination~~

46
